

Splash screen
Should only be visible for 1 sec or less, It would also be nice if it could fade to the next screen. We can include a version number here.

Map screen (def)
Should we create custom markers?
Clicking on a marker will create the disruption details screen.

Event list
This is an alternative to the map screen, as proposed in our meetings. We could use this as the default before the map is working properly.

Event details
View the details for an event. The list of tweets will be scrollable, but the event details will stick to the top of the screen.
